Diego Torres Arguedas

diego.torres.arguedas@gmail.com
074 885 858 38
London, United Kingdom

Professional Summary

- Software Engineer with experience working in startups and larger companies.
- Experience working in cross-cultural and remote teams.
- UK passport holder.

Work Experience

Strategic Imperatives, United Kingdom [Nov 2023 – Present] Tech Lead
▪ Technical Lead for Fibre Café, a single unified API gateway that connects UK internet service providers to multiple fibre networks.
▪ Lead and mentor a team of engineers, setting technical direction and code quality standards through code reviews, pairing and design discussions.
▪ Design and build scalable, event-driven APIs in TypeScript on AWS (Lambda, SQS, SNS, DynamoDB).
▪ Work directly with suppliers and wholesale clients (e.g. CityFibre, PXC) to define API behaviour and requirements for new integrations.
▪ Apply agentic software development practices, using AI coding agents (e.g. Claude Code) to speed up delivery, code reviews and documentation.

Weaver Build, United Kingdom [Dec 2021 – July 2023] Senior Fullstack Engineer
▪ Founding member of the tech team.
▪ Design and implementation of the real time messaging module within Weaver's mobile app using Ionic/Capacitor, React, Ably Realtime, GraphQL and AWS infrastructure.
▪ Experience with OpenAI's APIs, enabling users to generate messages by using content from their prior projects, chat history and personal data.

Leaf Grow (Leaf Music), United Kingdom [Sept 2015 – Dec 2021] Tech Lead Engineer / Senior Engineer
▪ Founding member of the tech team. Tech lead for Leaf Grow's backend projects using Django and Python.
▪ Managed a team of 5, overseeing performance, mentoring, and project delivery.
• Implementation of Leaf Grow's web app using React and Typescript.
▪ Definition of best practices e.g.: internal coding standards, Continuous Deployment, Continuous Integration, etc
▪ Built Leaf Music Android app from scratch using Java.
▪ Lead development of Leaf Music's backend using Firebase and Typescript

Desert Development - Costa Rica [Oct 2012– Set 2015] Senior Software Engineer
▪ Development of online games using C++ and Javascript, e.g.: Count Spectacular
▪ Implementation of internal tools using VB.NET

Possible Worldwide - Costa Rica [March 2011– Oct 2012] Senior Software Engineer
▪ Development of Web and Android projects, eg: All Recipes

Desert Development - Costa Rica [Nov 2009– Dec 2010] Software Engineer
▪ Development of casino games using C++

Hewlett Packard / Softtek - Costa Rica [Dec 2007 – Jul 2009] Software Developer
▪ Development of HP's Download Center website

L.L. Bean Inc. Latin America Office *[Aug 2006 – Dec 2007] Junior Software Developer*
▪ Development of Web projects using Java. Experience with Extreme Programming and Test Driven Development

Latest Projects

CityFibre TMF Ethernet & FTTP WBB Integration – Fibre Café (2026 – Present)
Led the backend integration of CityFibre's new TM Forum Open APIs into Fibre Café, adding Ethernet and FTTP Wholesale Broadband products. Built the event-driven supplier connector on AWS (Lambda, SNS, SQS, DynamoDB) covering availability checks, ordering, amendments, cancellations and fault tickets. Worked with CityFibre and wholesale clients to agree API behaviour.

Openreach & Vodafone integration into the Fibre Cafe (2025 - 2026)
Led backend integration of BT Openreach and Vodafone APIs into the Fibre Café platform. Built supplier connectors supporting SOAP/REST communication, OAuth2 and mTLS authentication, **event-driven** processing with **AWS Lambda**, **SNS**, and **SQS**.

Time to Resolve (T2R) (March 2024 - November 2024)
Integrated within the Fibre Café, it offers APIs that enable fibre users to assess service disruptions in real time and manage issues with connectivity providers.

Weaver's Matching API (Feb 2023 - July 2023)
A Rest API designed to simplify the process of pairing contractors with construction projects. Its main function is to generate a recommended list of contractors for any specific project, accessible to the Ops team via a dashboard web app. Contractors are ranked according to a cumulative score derived from individual attributes, each evaluated through formulas stored in a database. The API was implemented using **NodeJS** and **Express** and it was hosted in **Heroku**.

Weaver's Messaging module (Jan 2022 - Feb 2023)
Led development of the messaging module for Weaver's hybrid construction management app, enabling real-time communication between contractors, homeowners, and architects. Built chat features including attachments, unread indicators, push notifications, and project lifecycle actions using **React**, **TypeScript**, **AWS Lambda**, **DynamoDB**, and **CDK**. Implemented real-time messaging with Ably using WebSockets and Pub/Sub

architecture. Also developed an **OpenAI API** Integration that rewrote user messages dynamically using LiquidJS-based prompt templates and project/user context.

Leaf Grow's projects (2019 - 2021)
Worked on backend development for Leaf Music's pivot into marketing technology, building a platform for managing Facebook advertising campaigns. Contributed to two **Python/Django** services: one providing core web app CRUD functionality, and another using Celery background jobs to process and persist insights data from the rate-limited Facebook Marketing API.

Leaf Music's backend and Android app (2016 - 2019)
Leaf Music was a platform for music discovery, using the Youtube API to allow users to listen to music and create and share playlists. I developed the Android app from scratch using **Java**. During its lifetime, the app got close to 1 million downloads and 330k monthly active users.

Leaf Music's web app was a React app, the backend was a Firebase project under the **Google Cloud Platform**. It provided basic CRUD to the different clients (web, Android and iPhone). The backend for both clients was a Rest API using **Express** running on **NodeJs**

Formal Education

▪ Master's Degree in Computer Science - University of Costa Rica *[2010 - 2014]. Final project: "Effect of the number of colors and the distance measure on the similarity between image correlograms"*
▪ Bachelor's Degree in Computer Science - University of Costa Rica *[2002 - 2006]*

Technical Experience

Programming Languages
- Typescript, Python, Java

Web Development & Frameworks
- React, Next.JS
- Express, Node.JS.
- Django

APIs
- REST, Graph QL.

Mobile Development
- Ionic / Android development

Testing
- Jest, React Testing Library, Playwright.

Design & Architecture
- Systems Design
- Event-driven architectures

Databases
- No-SQL (Firestore, DynamoDB) & SQL (PostgreSQL)

Infrastructure & Dev Ops
- Github Actions
- Docker
- AWS
- Digital Ocean
